PROFESSIONAL SUMMARY

Solutions-driven Technical Support Engineer with 6+ years of experience managing SaaS production environments, IoT deployments, and AWS cloud infrastructure. Expertise in root cause analysis (RCA), SQL data investigation, and REST API troubleshooting, reinforced by hands-on Python and Bash automation. Proven track record of bridging support and engineering teams to resolve complex escalations, optimize system monitoring, and drive SLA-backed reliability.

TECHNICAL SKILLS

***AWS Core Services*:** S3, SQS, SNS, Kinesis
***Monitoring & Observability*:** CloudWatch, Grafana, Zabbix, Datadog
***Automation*:** Python, Bash
***Databases*:** SQL, MySQL, DynamoDB, Data Investigation, Query Optimization
***APIs & Integrations*:** REST APIs, JSON, Postman, Swagger, API Testing, Integration Troubleshooting
***Identity & Security*:** Okta, SSO, Access Management, TLS/SSL
***Support Operations*:** Production Support, Application Support, Incident Management, Root Cause Analysis, Escalation Management, SLA Management
***Systems*:** Linux, Windows, macOS
***Tools*:** Jira Service Management, Salesforce, GitHub, VMware, Slack, Twilio

WORK EXPERIENCE

IT Support Engineer II — Parcel Pending by Quadient

August 2021 – Present | Irvine, CA

- Drive end-to-end resolution for production incidents across REST APIs, Linux systems, MySQL databases, and distributed AWS SaaS infrastructure.
- Investigate SMS and email delivery failures through SNS, SQS, and Kinesis event logs to ensure customers reliably receive critical locker access codes and parcel notifications.
- Track distributed hardware health metrics (CPU, memory, temperature) via CloudWatch, utilizing telemetry data to proactively improve locker uptime and physical reliability.
- Query DynamoDB to validate client identities and lifecycle parcel data, while performing MySQL data investigation, query optimization, and schema maintenance to improve data accuracy by 25%.
- Extract and analyze courier drop-off and customer pick-up images from S3 to investigate and resolve complex mis-delivery escalations.
- Execute REST API operations via Postman and Swagger to validate parcel deliveries, synchronize client addresses with MySQL databases, and provision new device IDs for seamless locker hardware migrations.
- Develop Python and Bash automation health scripts, isolating poorly performing units and over-delivery errors to accelerate troubleshooting and improve overall system reliability with onsite field technicians.
- Collaborate with Engineering and Product teams to create reproducible bug reports and drive issue resolution.

***Product Support Specialist* — Parcel Pending by Quadient**

November 2020 – August 2021 | Irvine, CA

- Delivered SLA-driven application support and technical troubleshooting for enterprise customers, managing escalation tickets to resolve complex software configurations and integration failures.
- Administered identity and access management (IAM), utilizing Okta and SSO to provision secure user access and streamline onboarding across mixed Windows and macOS environments.
- Spearheaded pre-deployment testing with Product and Engineering teams to minimize post-release bugs in production environments.
- Co-directed proactive platform enhancements and firmware rollouts across a network of 2,000+ connected IoT parcel lockers, successfully reducing overall maintenance incidents by 20%.
- Authored comprehensive knowledge base articles and troubleshooting runbooks, standardizing escalation procedures to improve overall support efficiency and reduce Tier 1 resolution times.

***IT Field Engineer & NOC* — Strategic Service Solutions (MSP)**

December 2019 – November 2020 | Long Beach, CA

- Managed network infrastructure (switches, routers, servers, VoIP) across port operations, ensuring uptime, secure configurations, and routine patching.
- Supported RFID systems and Gate Management tools for container logistics; troubleshot integrations, validated scans, and coordinated with operations teams.
- Deployed server and client software updates using VMware automation tools; performed staged rollouts, post-deployment validation, and documentation.
- Monitored systems, responded to alerts, and performed incident triage within MSP environments.

PROJECTS

aws-IoT-raspberrypi | *CloudWatch, DynamoDB, Lambda, SQS, SNS*

- Designed an edge computing IoT pipeline utilizing a Raspberry Pi to continuously capture and transmit local hardware metrics (CPU, memory, disk usage) to AWS at 30-second intervals.

aws-EKS-Hybrid-raspberrypi | Python, *CLI, S3, EKS, Kubernetes, Terraform*

- Developed a hybrid edge telemetry pipeline on a Raspberry Pi 5, utilizing Python to automate secure, hourly metric uploads to Amazon S3, while provisioning underlying VPC networking and an Amazon EKS cluster for containerized workloads using Terraform.

CERTIFICATION

AWS Certified Cloud Practitioner — November 2023

EDUCATION

California State University, Long Beach
B.S. Business & Consumer Sciences — May 2019
